Annotation Guidelines: Interview Transcripts

Scope

These guidelines describe how we analyze the 20 semi-structured interviews (P1–P20). The interview protocol has 8 core questions (I-Q1–I-Q8) with follow-up questions; see instruments/interview_questions.pdf. The English transcripts appear in data/interview_transcripts.pdf.

Transcript Preparation

1. We record each interview with the participant's consent.
2. We produce transcripts through manual transcription and YouTube's automatic captions for private uploads.
3. We translate Bangla passages into English using Claude Opus 5.5.
4. Two authors check each transcript and translation against the original recording and correct inaccuracies.
5. We remove names, company names, and other identifying details.

Unit of Analysis

The unit of analysis is the **participant**. We report how many participants mention a finding, not how many times it appears.

Counting Procedure

1. **Read the full transcript.** Participants often describe the same experience in answer to different questions, so we read each transcript in full rather than only the answer to the related question.
2. **Count once per participant.** A participant counts once for a finding, regardless of how many times they mention it.
3. **Record the source.** For each counted participant, we record the interview question (I-Q) where the mention occurs.
4. **Verify.** Two authors check each count against the transcripts. When the authors disagree, they discuss the passage and include it only if both agree that it meets the description.

Output

The resulting counts, with participant IDs and interview questions, appear in analysis/interview_counts.xlsx
